

# Mouse Extermination Device

## MAUKI

### Key advantages:

- ✓ 100% effective
- ✓ industrial engine
- ✓ with fuel pump
- ✓ large range
- ✓ hot dip galvanized wheelbarrow
- ✓ harmless to birds and cats

### Application:

The MAUKI is a powerful and very reliable mouse extermination device, which can also be used against voles. This method of control is harmless to cats, birds of prey, foxes and other beneficial organisms.

### Design:

The sturdy and yet easy to handle wheelbarrow is hot dip galvanized and equipped with a smoke bell and probe rod. The high performance 5.5 HP Honda engine complies with state-of-the-art technology is long-lasting and service friendly. For the safety of the operator the gas development can be turned off when relocating the device.

### Technical information:

Type :	<b>MAUKI GX 200</b>
Motor :	Honda 200 cm <sup>3</sup>
Performance:	4.1 kW / 5.5 HP
L / W / H:	126 / 59 / 64 cm
Weight:	37 kg
Warranty:	2 years

### Functionality:

With a fuel pump a petrol-diesel mixture is sucked in and, precisely dosed, injected into the special muffler where it evaporates. These fumes are then lead through a flexible metal hose and a bell cap into the duct system. The high pressure of the industrial engine quickly distributes the fumes and presses the oxygen out of the duct system. The pests have no chance to escape. Within seconds the respiratory tract is paralyzed. This leads to a quick and painless death. There is no risk of secondary poisoning in case the stunned or dead mouse is eaten by a cat or a raptor.
